

ABSTRACT

An adhesive cord cover for enveloping a cord, such as an electrical cord or chandelier chain.

The adhesive cord cover is formed from a lengthwise strip of fabric. A pressure sensitive adhesive is attached to the fabric strip, preferably along a first lengthwise edge. The pressure sensitive adhesive

5 is positioned and configured to allow a fastening side of the pressure sensitive adhesive to be selectively adhered to the lengthwise strip of fabric to thereby form a tubular configuration for enveloping a cord. The pressure sensitive adhesive is preferably an adhesive transfer tape. The transfer tape preferably has a removable liner on the fastening side. The removable liner assists in preserving the adhesive properties of the pressure sensitive adhesive prior to use. The pressure

10 sensitive adhesive transfer tape is preferably a continuous strip that extends substantially along the entire length of the piece of fabric.
